# 2004 WISCONSIN

# **Trapping Regulations**

This booklet gives you a summary of Wisconsin's most important trapping laws and how they affect you; it is not a complete set of laws.

Wisconsin Department of Natural Resources PUB-WM-002 2004

# Dear Wisconsin Trapper,

With the 2004 Wisconsin Trapping Regulations, we begin with new opportunities in the world of furbearer management. Wisconsin's diversity of stakeholders, everincreasing trapper education efforts, new tools and outdoor opportunities is unparalleled east of the Mississippi!

In addition, we have superb cooperation and teamwork between the Wisconsin Conservation Congress, Wisconsin Trappers Association, Universities, WDNR, the public, trappers, neighboring states and federal agencies.

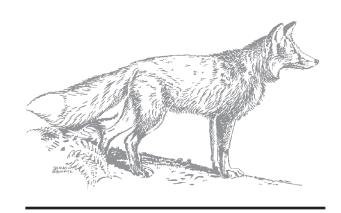

The Wisconsin Cooperative Trapper Education Program continues to grow and strengthen with thousands of new trappers taking up this time-honored tradition. After learning about the basic biology of furbearers, the role of furbearers in our ecosystems, trappers' role in responsible management, trapper ethics and responsibilities, these graduates take to the trapline with an excellent foundation. This strong education program and proactive direction will continue to make Wisconsin a leader in furbearer management in North America.

Have a safe, memorable trapping season. Learn new skills, respect others' needs, and take a friend or family member with you. Through your guidance, the beauty of our forests, fields, and wetland communities can become an inspiration for others. Through your responsible actions, non-trappers will have a greater appreciation of what makes an ethical trapper one of the finest naturalists in our region. Prior to, during and after the trapping season, act as if the future of trapping depends on your actions – because it does! Have a safe, productive and memorable season.

John F. Olson Furbearer Specialist

The Wisconsin Department of Natural Resources provides equal opportunity in its employment, programs, services and functions under an Affirmative Action Plan. If you have any questions, please write to Equal Opportunity Office, Department of the Interior, Washington, D.C. 20240.

This publication is available in braille, audio cassette, large print or computer format upon request. To order, call (608) 266-8204.

Cover photo: John Irwin, trapper education instructor and president of the WTA, and University of Wisconsin—Stevens Point students Ellen Heihecker and Jason Tamm at the "University Fur Ecology School."

### What's New in 2004

Carcass Collection for 2004: You must present bobcat carcasses; fisher carcasses from Fisher Management Zones E & F; and fisher heads from Fisher Management Zones A, B, C & D when pelts are registered. As in past years, you are required to skin the animal and separate the pelt from the carcass before registration at designated DNR stations. The only modifications to this rule are those specimens going to a taxidermist. We seriously need these carcasses for research and management purposes.

Use of Cable Restraints on Dry Land: Although such use was approved and legal beginning January 1, 2004, this tool and its regulated use are new to this pamphlet. Responsible use of this tool is important, so please read and understand all rules pertaining to cable restraints (pages 12-15). Remember that nonentanglement is important. For further information, refer to publications WM-442 and WM-443 or view them and other pertinent information on our website at: <a href="http://dnr.wi.gov/org/land/wildlife/trap/index.htm">http://dnr.wi.gov/org/land/wildlife/trap/index.htm</a>.

**New Southern Mink & Muskrat Zone**: The previous Central and Southern mink and muskrat zones have been combined together and will be referred to as the Southern Mink and Muskrat Zone.

**Incidental Take Provision**: To further ease the burden on trappers/hunters and conservation wardens you now have access to the 1-800-TIP-WDNR hotline. See page 19 for details.

### Mississippi River Zone

- Following considerable input from citizens of Wisconsin, especially trappers and duck hunters, the
  U.S. Fish and Wildlife Service and the Wisconsin
  Department of Natural Resources agreed to implement an earlier opening for trapping in the Mississippi River Zone.
- This change, initiated in 1999, was the first time since the 1977-78 season that trapping has been permitted during the duck-hunting season in this zone. This year the muskrat and mink seasons in the Mississippi River Zone open on November 8. If the duck season closes prior to November 8, the trapping season will begin the day following the end of the duck hunting season.
- The success of this new program rests with the trapping and hunting community. During years when seasons overlap, trappers can minimize contact with waterfowl hunters by setting and checking traps on weekdays, checking traps during mid-day, pulling

trap lines prior to the weekend, asking hunters for permission to check traps in areas where hunters are setup, and approaching areas with hunters only when ducks are not flying. Duck hunters can help by being aware of trapper presence and encouraging mid-day trap checks.

- On private lands within the Mississippi River Zone the trapping seasons for raccoon, coyote and fox open with the regular state season dates as they always have. (See page 26.)
- On lands managed by the US Fish & Wildlife Service as part of the Upper Mississippi River National Wildlife and Fish Refuge and located within the Mississippi River Zone, the raccoon, coyote and fox seasons open with the muskrat and mink seasons. The beaver and otter season dates are not affected. Trapping on federal lands within the Mississippi River Zone involves obtaining a Refuge Trapping Permit, a restriction on number of traps allowed, trap placement restrictions, time of the trapping opener and trap check hours, to name a few.
- Trappers, please take special care when trapping on uplands. We recommend you consider refraining from placing upland sets until after the close of the duck season.
- Trappers and waterfowl hunters alike must remember there are others who use and enjoy the amazing resources of the Mississippi River. Please remain courteous, and accommodate each other's needs.

Thank you in advance for your cooperation.

### Website Information

 For more information on Furbearer Management and Trapping Issues try the DNR website at http://www.dnr.state.wi.us/org/land/wildlife/ trap/ or the website of the International Association of Fish and Wildlife Agencies (I.A.F.W.A.) at http://www.furbearermgmt.org/.

### **Definitions**

**Cable Restraint** - a noose used for restraining furbearing animals which is NOT set or staked in such a manner as to permit the restraint device or the trapped animal to reach water that is not frozen.

**Capable of Drowning** - means a set designed to allow the trapped animal to travel to water of sufficient depth to cause drowning. Slide wires or poles, locking devices, slip chains, weighted traps and traps staked in deep water are commonly used in drowning sets.

**Dry Set** - means a trap set or staked to be completely on dry land with no possibility of the trap or trapped animal to reach water that is not frozen.

**Enclosed Trigger Trap** - means any trap with a pull-activated trigger, inside an enclosure and recessed 1<sup>1</sup>/4 inches or more, from an opening that is no greater than 1<sup>3</sup>/4 inches in diameter.

**Sight Exposed Bait** - means any bait which can be seen from above the bait.

**Snare** - a noose used for restraining furbearer animals in a water set.

**Water Set** - means a trap or snare which is set or staked in a manner to permit the trap, snare or trapped animal to reach water that is not frozen.

### **Trapping Hours**

Legal trapping hours are from 4:00 a.m. to 8 p.m.

### **License and Permit Information**

- **1. Residency:** You must be a Wisconsin resident to purchase a Wisconsin trapping license. **Cost:** \$20.00 Please see pages 33-36 for trapper education requirements.
- 2. Duplicates: You can acquire a duplicate trapping license at any license outlet with your driver's license and Social Security number or DNR customer number. Duplicate trapper education certificates are also available through the DNR in Madison.
- 3. Use: You may not:
  - transfer your license, permit or tag, or allow its use by anyone else.
  - carry any trapping license, permit or tag issued to anyone else.
  - obtain a trapping license, permit or tag for someone else.
- **4. Landowner Provisions:** The owner or occupant of any land, and family members who reside on the land, *do not need a license to:* 
  - trap coyotes, beaver, foxes, raccoon, woodchucks, rabbits and squirrels on the land year-round. (See "Beaver Damage Control" on page 30 for more information.)
  - live trap with cage traps for beaver, rabbits, raccoons and squirrels on the land at any time in cities, villages or other areas where the discharge of firearms is unlawful. Live trapped animals must be either killed or released within 24 hours on private land with the landowner's permission.
- **5. Purchasing Fur:** You must possess a Fur Dealers License or DNR permit to purchase fur.
- **6. Animals Causing Damage:** During the closed season, a DNR permit may be required to remove nuisance animals. Contact the nearest DNR Service Center (see page 40).

### **Trap Checking Requirements**

**Dry Set** - You must check dry sets at least once each day and remove any captured animals from the set.

**Water set** - You must check water sets at least once each day and remove any captured animals from the set.

**Drowning Set** - Sets capable of drowning must be checked within a 4-day period following the last tending of the set and any captured animals removed from the set. You must monitor water levels to ensure effective drowning sets.

**Ice Set** - There are no mandated trap checking periods for sets made under the ice.

# **Trap Size & Placement Restrictions**

Consider all set placement to avoid contact with humans and domestic animals. When using conibear type traps on dry land, we strongly encourage the use of cubbys and elevated sets. Future use of conibear type traps depends on it!

- set, place or operate any waterset smaller than 5 and 1/2 inch jaw spread for steel-jawed traps and 6 and 3/4 inch x 6 and 3/4 inch for body-gripping type traps (conibear type) during the beaver and otter seasons, except when the muskrat or mink season is open in the zone you are trapping.
- use sight exposed bait consisting of feathers, animal flesh, fur, hide or entrails within 25 feet of any trap or cable restraint.
- operate trap sets which permit the trapped animal to reach water, except when the muskrat, beaver or otter trapping season is open in the zone you are trapping.

- set a trap, cable restraint or snare other than a commercially manufactured enclosed trigger trap closer than 15 feet from any beaver dam. (Landowners see "Beaver Damage Control" on page 25.)
- set, place or operate any body-gripping type trap (conibear type) that is larger than 7 x 7 inches unless one-half of the trap is located underwater at all times.
- set, place or operate any body-gripping type trap (conibear type) greater than 6 x 6 inches or any snare regardless of the size of the noose in the following locations:
  - Within 3 feet of any federal, state or county road right-of-way culvert unless completely submerged in water.
  - 2. Within 3 feet of any woven or welded wire fence.
  - 3. Within 100 yards of any building devoted to human occupancy without the owners consent.
- set, place or operate any steel-jawed trap with teeth unless such traps are located completely underwater at all times.
- set, place or operate any steel-jawed trap with a spread width of more than 8 inches.
- set, place, or operate any **snare** regardless of the noose size, *unless one-half of the snare noose is located underwater at all times.*
- set, place or operate any snare unless the noose cable and noose attachments conform to the following specifications:
  - 1. Cable length may not exceed 5 feet.
  - $2. \, It \, must \, be \, constructed \, of \, galvanized \, aircraft \, cable. \,$
  - 3. The cable or wire diameter may not exceed 1/8 inch.
  - 4. It must have a mechanical lock and swivel.
  - 5. It must be non-spring activated.

### Methods

All live furbearing animals taken during the open season for such species shall be killed immediately and made part of the daily bag or released unharmed. It is unlawful to keep such animals alive after their capture, unless you have first obtained a DNR permit, license or authorization to possess the animal alive.

Elevated traps are legal for furbearers as long as the sight exposed bait law is followed. (Please see page 16 for specific regulations pertaaining to 220 conibear type traps.)

- place a trap, snare, bait, cable restraint or scent for furbearing animals during the closed season.
- set any trap, cable restraint or snare unless a metal tag is attached, stamped or engraved legibly with the name and address of the owner. Heavy-duty stamped tags are desirable.
- take or attempt to take beaver, fisher, mink, muskrat or otter by any means other than trapping or snaring.
- possess any trap for the purpose of catching furbearing animals other than a steel-jawed trap, live trap, enclosed trigger trap, body gripping trap (of the conibear type), cable restraint or snare. Such traps shall be constructed so that not more than one animal can be taken or captured.
- disturb or molest any mink den, muskrat house, muskrat feeding house or beaver dam.
- place on the ice, any artificial house or den for the purpose of catching any furbearing animals.
- molest or take traps, cable restraints, snares or trapped animals that belong to someone else.

**Trap Theft:** Stealing or molesting traps, cable restraints or snares is a criminal act and is punishable by fine (\$300-\$1,000), imprisonment (up to 90 days) or both, and a mandatory 5-year revocation of license.

# **Cable Restaint Regulations**

- set, place or operate cable restraints for any species other than fox and coyote.
- stake a cable restraint in a manner that allows the animal or the restraint device to reach any part of a fence or rooted woody vegetation greater than 1/2 inch diameter.
- set, place or operate any cable restraint with the bottom of the loop less than 6 inches or greater than 12 inches above the first surface beneath the bottom of the set cable restraint loop (Figure 2, page 15), where the surface is ground, ice, crusted or packed snow or any other hard surface.
- set, place or operate any cable restraint unless the noose cable and noose attachments conform to the following specifications:
  - 1. Cable length not to exceed 7 feet.
  - 2. Cable must be galvanized aircraft cable.
  - 3. Cable must be of 7 bundles comprised of 7 wires per bundle or 7 bundles comprised of 19 wires per bundle, with a diameter of 1/8 inch or 3/32 inch.
  - 4. Include a breakaway device or stop rated at 285 pounds or less.
  - 5. Include a reverse-bend washer lock with a minimum outside diameter of 11/4 inches
  - 6. Include cable stops affixed to the cable to ensure that the portion of the cable, which makes up the

- noose loop may not be longer than 38 inches when fully open (Figure 1), or less than 8 inches when fully closed.
- set out or place a cable restraint, whether set or sprung, during the closed season. The open season for cable restraints is Jan. 1 -Feb 15.
- capture migratory game birds, upland game birds or any game animal except fox and coyote with a cable restraint.

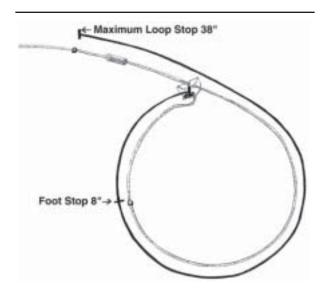

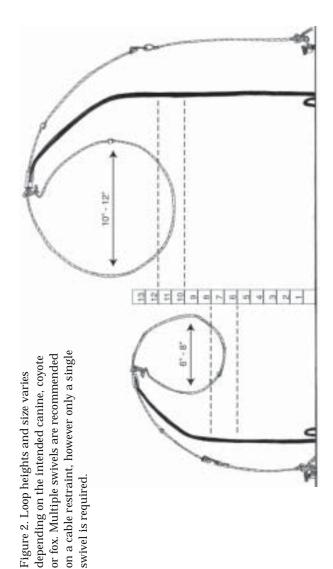

Figure 1. Maximum and minimum loop size is easily measured by circumference. The minimum loop stop is set at 8 inches and the maximum loop stop is set at 38 inches. This results in a loop no smaller that 21/2 inch in diameter nor larger than 12 inches in diameter.

# **Conibear Regulations**

No person may set, place or operate any 7"x 7" body-gripping, 220 conibear type, trap; as a

- **Water set** unless one-half of the set trap is located underwater at all times;
- **Elevated set** unless the trap is placed at least 5 feet above the surface;
- Baited and/or scented set in or on the ground unless the trap trigger is within an enclosure that provides openings no greater than 50 square inches for a 7 inch recess; OR, an 8 inch height by 10 inch width opening with a 10 inch minimum recess from the enclosure openings;
- **Unbaited and/or unscented trail set** unless the trap is within an enclosure that provides openings no greater than 10 inches in height and 10 inches in width and is recessed a minimum of 15 inches from the enclosure openings; or
- **Bottom entry enclosure set** unless the entire opening of the enclosure is no more than 7 inches above the surface.
  - The measurement to the surface is the distance to the first surface beneath the trap or opening where the surface is ground, ice, crusted or packed snow or any other hard material.

For the purposes of this section, an enclosure means any device that creates a barrier to the trap allowing entry only through designated openings.

### **Possession Restrictions**

**Definitions:** (1) *Raw fur* means the undressed skins or pelts of any furbearing animal, including ones that have been stretched and dried. (2) *Green pelts* include the unskinned carcass, the skins or the fleshed pelts of any furbearing animal that have not been stretched and dried or tanned.

- possess the green pelts of any furbearing animal, except beaver, beginning on the 6th day after the season closes.
- possess a bobcat, fisher or otter pelt at any time, unless a valid carcass tag is attached and locked to the pelt.
- possess any mink, muskrat, fisher, or otter pelt that has been shot or speared.
- possess any raw fisher, mink, muskrat or otter pelt at any time without a current trapping or fur dealer's license or special license or permit issued by the DNR.
- ship fur unless the outside of the container is marked with the number and species being shipped, and the name, address and trapping license number of the shipper.
- retain any raccoon taken incidentally with a cable restraint from January 1 to February 15, unless it is during the open season for raccoons.

### Special Regulations Bobcat, Fisher and Otter

### **Permits and Tags**

Permit applications for Bobcat, Fisher, and Otter are available starting in early summer. You may pay your application fee (if required) at any license sales location, online at dnr.wi.gov or by phone at 1-877-WI-LICENSE (945-4236). You must complete and submit your application form using one of the following options:

- 1. Complete/submit your application online at dnr.wi.gov (you will get confirmation that DNR received your application); or
- Complete the paper application and submit by mail to DNR Licensing, P.O. Box 7924, Madison, WI 53707. Paper applications must be postmarked no later than September 10th or received in person at any DNR Service Center by that same date.

You must possess your valid license, permit and tags while trapping. Fees for permits are as follows:

### **Application Fees**

Species	Patron	Trapping
	<b>License Holders</b>	<b>License Holders</b>
Bobcat	\$3.00	\$3.00
Fisher	Free*	\$3.00
Otter	Free*	\$3.00

<sup>\*</sup> Patron License holders still need to submit an application.

### You May not:

 Possess or have under control any bobcat, fisher or otter unless you immediately validate, attach and seal a pelt tag through the opening of the animal's mouth to the opening of its eye, immediately beneath the skin (see instructions on the carcass tag for further details.) The pelt tag shall remain attached

- to the pelt until removed by a fur dresser or taxidermist at time of preparation.
- Possess, loan or borrow the license or carcass tag belonging to another

### Registration

### You may not:

- transfer, give, trade, sell, or purchase any bobcat, fisher
  or otter pelt unless it bears a DNR registration tag
  attached by an authorized DNR representative.
- possess fisher, bobcat, or otter pelts later than 5 days after the month of harvest without registering the pelt(s) with an authorized DNR representative.

You must skin bobcat, fisher and otter and separate the pelt from the carcass before registering the pelts at designated DNR stations. The only exception is with specimens going to a taxidermist. In those situations it is not necessary to separate the pelt from the carcass for registration. However, you must retrieve the carcass from your taxidermist and deliver it to the DNR within 30 days of registration. In 2004, you must present your bobcat carcass; fisher carcasses from management Zones E & F; and fisher heads from Management Zones A, B, C, & D when your pelts are registered; the DNR retains the carcasses and heads for research purposes. Station locations vary. Watch for newspaper notices prior to the season or contact your nearest DNR office (listed on page 40).

# **Incidental Take Policy**

In those circumstances where incidental catch of a protected species is possible, please contact your local conservation warden (or call 1-800-TIP-WDNR) for

instructions on how to release, or if dead, how to transport to the Department. A protected species is any species for which the season is closed, there is no open season, or a person has no authority to possess.

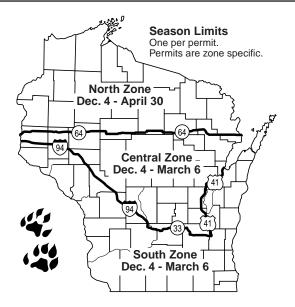

### **Animals Protected at All Times**

The following wild animals are designated protected: badger, Canada lynx, cougar, flying squirrel, moose, pine marten, gray wolf, white deer, wolverine and any other endangered or threatened species.

# **Special Rule Clarifications**

- Trapping Along Roadsides: Permission to trap road right-of-ways can be a complex issue. Most right-of-ways are owned by either the State or the local unit of government, however in some cases, the adjoining landowner still maintains ownership of the underlying land. Trappers should contact the owner of the land underlying any public road, street or highway for permission to trap.
- Trapping Navigable Waterways: Trapping on private land in Wisconsin, including on navigable waters over private land, may constitute a trespass. Trappers need to obtain permission before trapping on any private land, even if entry is by public waterways (enforced by the county sheriff's department).
- Preseason Marking of Trap Sites: Using stakes or other devices to mark a trap site anywhere prior to the season opener has no legal basis, is not recommended, and does not reserve the site for the person placing the stake or markers.
- Unprotected Species: Opossum, skunks and weasels are unprotected and may be trapped year-round by persons possessing a trapping license.

### Otter

### **Application Deadline: September 10**

Otter taken during beaver trapping are not legal unless the otter season is open and you possess a valid otter tag. Otter may not be taken any other time. (See section on incidental take, page 19.)

# Pick up litter and keep your trapping grounds healthy!

### **Fisher**

Fisher Management Zones are made up of the following Deer Management Units:

- **Zone A** 1, 1M, 2, 3, 4, 5, 8, 9, 10, 11, 12, 15, 16, 17, 22, 78, and 79
- **Zone B** 6, 7, 13, 14, 18, 19, 20, 23, 24, 25, 26, 28, 29A, and 30
- **Zone C** 29B, 31, 32, 33, 34, 35, 36, 37, and 52
- **Zone D** 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49A, 49B, 50, 51A, and 51B
- **Zone E** 27, 53, 55, 56, 57, 57A, 57B, 57C, 58 and 59A
- **Zone F** Remainder of the state.

### **Season Dates**

All zones Nov.1 - Dec. 31

### **Application Deadline: September 10**

### **Season Limits**

Special zones (A, B, C, D, E & F) *only* by permit(s).

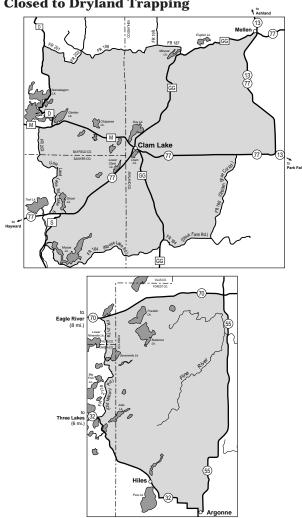

Note: In 2004, you must present your fisher head for Zones A, B, C, & D, and fisher carcass for Zones E & F at time of registration.

Application deadline: Sept. 10

Marten Restoration Areas Closed to Dryland Trapping

# Bobcat, Coyote, Raccoon, Red and Gray Fox

### **Bobcat**

North of Highway 64 only by permit.

**Season Limit**One per permit.

### **Bobcat Application Deadline: September 10**

**Note:** In 2004, you must present your bobcat carcass at the time of registration.

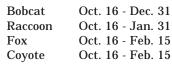

### Coyote, Raccoon, Red and Gray Fox

No bag limit statewide.

### **Season Dates**

### North of Highway 64

Fox	Oct. 30 - Feb. 15
Coyote	Oct. 30 - Feb. 15
Raccoon	Oct. 16 - Jan. 31

# **Special Cable Restraint Season**

### **Statewide**

Fox Jan. 1 - Feb. 15 Coyote Jan. 1 - Feb. 15

**Note:** This is the only time during the coyote and fox season when cable restraints may be used.

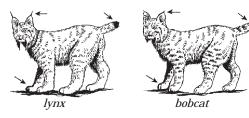

### Mississippi River Zone

Federal Lands: On federal lands within the Mississippi River Zone (see page 25), the coyote, raccoon, and fox seasons do not open until the muskrat and mink seasons open. (See page 28).

Private Lands: On private lands within the Mississippi River of Zone, the coyote, raccoon, and fox seasons open as listed "South of Highway 64" (above).

**Canada lynx**, a rare visitor to Wisconsin, is now listed as a threatened species by the U.S. Fish and Wildlife Service. Please help us protect this unique animal through your careful observation. View the illustrations below and if you observe a Canada lynx contact your local DNR office immediately.

Lynx are distinguished from bobcat primarily by the tip of their tail, which is completely black. Only the upper half of the tail tip is black on the bobcat. Lynx also have larger ear tufts, are lighter in coloration, have large densely furred feet, and less distinct tracks than bobcat.

# TV Show for Kids

Into the Outdoors is DNR's Emmy Award winning TV show for kids. The half-hour program is hosted by kids who use the Internet to find other kids their age doing outdoor activities and learning about the environment. The show is linked to *EEK!*, DNR's web site for kids, and airs on weekend mornings. See local TV listings for times and stations.

### Mink

### **Season Limits**

No bag limit statewide.

Zone	Dates	رُهُ وَهُ مُ
Northern	Oct. 23 - Dec. 31, 2004	
Southern	Oct. 30 - Dec. 31, 2004	7.7
Winnebago	Oct. 30, 2004 - Mar. 15,	2005
Mississippi	* - Jan. 15, 2005	

<sup>\*</sup> Begins the day after duck season closes or the second Monday in November (Nov. 8), whichever occurs first.

### Muskrat

### **Season Limits**

No bag limit statewide.

Zone	Dates
Northern	Oct. 23, 2004 - Feb. 28, 2005
Southern	Oct. 30, 2004 - Feb. 28, 2005
Winnebago	Oct. 30, 2004 - Mar. 15, 2005
Mississippi	* - Feb. 28, 2005

<sup>\*</sup> Begins the day after duck season closes or the second Monday in November (Nov. 8), whichever occurs first.

Muskrats taken while beaver trapping (during beaver season) are legal fur. Note the rules listed under "Trap Size and Placement Restrictions" on pages 10 and 11.

Horicon National Wildlife Refuge: Open to trapping on a permit system. Permit details are available through:

U.S. Fish & Wildlife Service Refuge Manager Horicon NWR W4279 Headquarters Rd. Mayville, WI 53050 920-387-2658

Special trapping permits are required to trap the Upper Mississippi Federal Wildlife Refuge. For more information contact:

Headquarters Office 51 E. 4th Street Winona, MN 55987 507-452-4232

### Beaver

### **Beaver Damage Control**

- Landowners, occupants, and family members may hunt or trap beaver on their land at anytime without a license. Landowners may also trap on beaver dams. Beaver dams may be removed without a permit.
- See DNR publication no. WM-007, Beaver Damage Control, or contact local DNR office for more information.

# **Best Management Practices**

Trappers and state wildlife agencies are currently developing "Best Management Practices" (BMPs) for trapping furbearers in the United States. BMPs are methods to improve trapping by developing recommendations using sound science. They are developed through actual field tests and careful data collection. The information will be eventually provided to state agencies and trappers for voluntary use in their trapper education and furbearer management programs.

Wisconsin has been involved in the BMP process since it began in 1997. Field trap tests to date, have occurred throughout the state. Licensed trappers, who are active members of the Wisconsin Trappers Association, have completed all field tests during the regular trapping seasons. "The Eastern Coyote BMP" is now available, the first of several such publications. A Wisconsin 3-year study was completed last year resulting in the publication, WM-443, Cable Restraints in Wisconsin – A Guide to Responsible Use. You can request a copy through your local DNR office or go to our website at dnr.wi.gov/org/land/wildlife/trap/index.htm. Results of the state-sponsored Best Management Practices (BMP) study resulted in the legal use of cable restraints in Wisconsin.

### **Public Impressions of Trapping**

The International Association of Fish And Wildlife Agencies (IAFWA), the sponsor of this huge BMP effort, selected Connecticut, Indiana, and Wisconsin to study public perceptions of educational and promotional materials in 2000 and 2001. This selection was the result of hard work and determination of our trappers, technicians and others behind the scenes in Wisconsin. This was good not only for our state, but it also positively reflects on the proactive efforts of the

WTA, WDNR, Conservation Congress and the trapping community. Congratulations!

### What Have We Learned?

Through the results of science-based, highly accurate surveys, we have learned that the following messages are important in communicating the role of trapping in Wisconsin.

- Regulated trapping does not cause wildlife to become threatened or endangered.
- Trapping is managed through scientifically-based regulations strictly enforced by Wisconsin Conservation Wardens.
- Wisconsin DNR, with input from stakeholders, continually reviews and develops rules, regulations, education programs, and capture methods that consider animal welfare.
- Regulated trapping provides many benefits including: reducing wildlife damage to crops and property; and reducing threats to human health and safety.

### Why are BMPs needed?

- To ensure the continued responsible management of wildlife resources;
- To continue the process of improving traps and trapping methods that will maintain and improve animal welfare;
- To maintain public acceptance through a reduction in real and perceived problems associated with trapping;
- To sustain regulated trapping now and in the future, and to maintain the integrity of furbearer management programs throughout the United States.

Trapping will only prosper and continue if the trapping community, along with natural resource agencies, work together to improve harvest systems and promote the humane treatment of furbearers. Thanks for your support!

# **Trapper Education Course**

# Wisconsin Cooperative

# Trapper Education Program (WCTEP)

A Cooperative Trapper Education Program of the Wisconsin Department of Natural Resources and Wisconsin Trappers Association

### **Fur trapping in Wisconsin**

Few people realize how important trapping of furbearing animals has been in Wisconsin. Starting in the early 1600s, Europeans such as Jean Nicolet began exploring Wisconsin, lured by the promise of waters teeming with beaver. For nearly 200 years Europeans traded with local Native American trappers at trade centers such as Green Bay and Prairie du Chien. As European settlement expanded, trapping continued to play an important role in the development of the state.

Since those early years, trapping in Wisconsin has changed a great deal. Furs are no longer brought down the Wisconsin River to trade for tools and flour. Today, trapping is a source of outdoor activity for several thousand people. It is carefully regulated to protect sensitive species, to encourage ethical practices, and to help control furbearer populations such as beaver, muskrat and raccoon, which can become overpopulated, diseased or cause property damage and flooding. The future of trapping in Wisconsin depends on proper management and ethical trapping — a task that requires the cooperation of all trappers, landowners, and resource managers.

### Why trapper education?

We believe that trappers create a good image when they engage in responsible and ethical pursuit of our furbearing resource. Trapper education teaches new or inexperienced trappers ethical trapping procedures, the most humane trapping methods, the history of trapping in Wisconsin and North America, and basic wildlife management principles. It is also important for trappers to learn and understand the importance of maintaining good relationships with landowners, other outdoor enthusiasts, and managers of our natural resources. The trapper education course provides a solid beginning to trapping education — an education you will use everyday on the trapline.

### Who must attend?

All first-time trappers must complete the Trapper Education Course prior to purchasing a trapping license. It is recommended that you be at least 12 years old. Class size may be limited, so early registration is recommended.

Persons exempt from this requirement must have previously purchased a trapping license, completed a voluntary trapper education course, or be actively engaged in farming as defined in State Statute 102.04(3).

**Note:** All trappers applying for otter, fisher and bobcat tags must complete the course *before* the permit application deadline. *No late applications will be accepted.* 

### What you will learn

The course is designed to provide classroom time and outdoor practice time. A written exam will be given at the end of the last session, which you must pass in order to successfully complete the course.

### It includes:

- Trapping history and highlights in wildlife conservation
- · Role of trapping today
- · Principles of wildlife management
- · Wetland values
- · Furbearer management, biology, and disease
- · Trapping laws and ethics
- · Trap preparation, adjustment, setting, and safety
- · Humane trapping methods
- Pelt preparation, skinning, grading, and marketing
- · Practice setting dry land sets and water sets

### The instructors

Each of the certified trapper education instructors in Wisconsin has completed a WTA-DNR instructor course. All are experienced trappers and many are professional biologists. They live in communities throughout Wisconsin

### Correspondence course

A correspondence course is available for students who cannot attend the regular Trapper Education Course classes. Completing the course objectives in this manner will take approximately five weeks. Contact Mike Widner, Correspondence Course Director, P.O. Box 483, Baraboo WI, 53913, (608) 356-9622, muskrat\_mike@yahoo.com for details.

### Where are the classes held?

Classes will be held in communities statewide. Class locations are available by contacting intructors or viewing our website at <a href="mailto:dnr.wi.gov/org/land/wildlife/trap">dnr.wi.gov/org/land/wildlife/trap</a>.

### When do the classes meet?

Each instructor sets their own class schedule, but commonly the course requires 3-4 evening sessions and one weekend morning or afternoon.

### What does it cost?

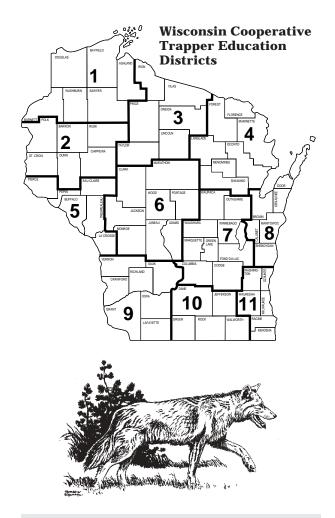

The fee for most courses is \$8.00 payable to the Wisconsin Cooperative Trapper Education Program. This includes all your instruction materials. Some overnight workshops may have a higher fee if meals are provided.

# **Instructional materials provided**

**For each student:** a student manual, a set of Wisconsin trapping regulations, a graduate card and arm patch, and first year's trapping license for successful graduates.

### How do you sign up?

Locate the district where you live on the map below. The person on page 38 identified with that district is the district trapper education coordinator. Contact him or her to get details on course dates, times, locations, and the name of the instructor nearest you. You can use the form on page 39 if you wish. If you cannot reach a district coordinator, contact the statewide coordinator, or DNR Trapper Education Coordinator, 101 South Webster St., Madison, WI 53707-7921.

Visit the WCTEP website at: dnr.wi.gov/org/land/wildlife/trap/trapeduc
